600 psi (41,4 bar)	300 psi (20,7 bar)	113 °F <i>(4</i> 5 °C)	10 psi (0,7 bar)	16 gpm (3,6 m³/h)	<0,1 ppm	5,0	1,0 NTU		
Other Operating Limits		6					ratio of concentrate to the flow for any element		
				3,0 ÷ 10,0)	5:1			

The limitations shown in Operating Limits are for general use. The values may be more conservative for specific projects to ensure the best performance and longest life of the membrane.

Permeate flow for individual elements may vary + or -15 percent. Elements are vacuum sealed in a polyethylene bag Notice: containing less than 1.0% sodium meta-bisulfite and 10% propylene glycol solution.

Guidelines: Permeate obtained from first hour of operation should be discarded.

- Avoid static permeate-side backpressure at all times.
- These membranes may be subject to drinking water application restrictions in some countries: please check the application status before use and sale.
- For element loading use only glycerine to lubricate o-rings and brine seal.

The customer is fully responsible for the effects of incompatible chemicals on elements. The presence of free chlorine and other Oltremare believes the information and data contained herein to be accurate and useful. The information and data are offered in good

faith, but without guarantee, as conditions and methods of use of our products are beyond our control. Oltremare assumes no liability for results obtained or damages incurred through the application of the presented information and data.
